Survey records analysed

Avg Milk Rating

8.03/10

Milk-based product score

Avg Water Rating

7.81/10

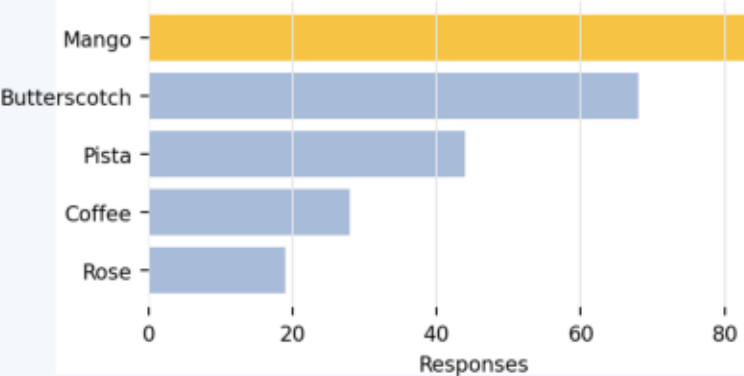

Water-based product score

Positive Intent

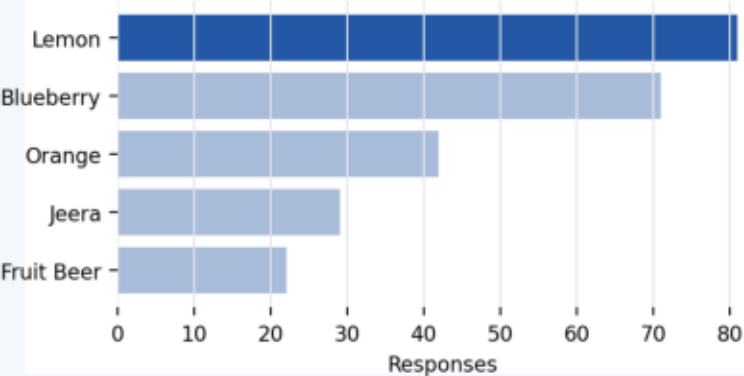

98.4%

High + Medium purchase intent

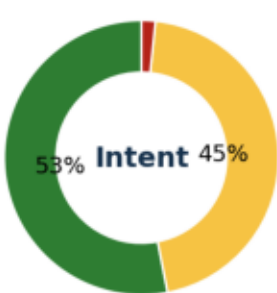

Top Milk-Based Flavours

Top Water-Based Flavours

Purchase Intent Mix

High intent dominates; Low intent is minimal.

Executive Recommendation

Prioritize Mango as the lead milk-based flavour and Lemon as the lead water-based flavour. Blueberry should be treated as a secondary water-based growth option. Maintain both Sugar and Non-sugar variants because Sugar demand is strong while Non-sugar still has meaningful opportunity. Use flavour recall, premium taste perception, and summer refreshment as core marketing messages.

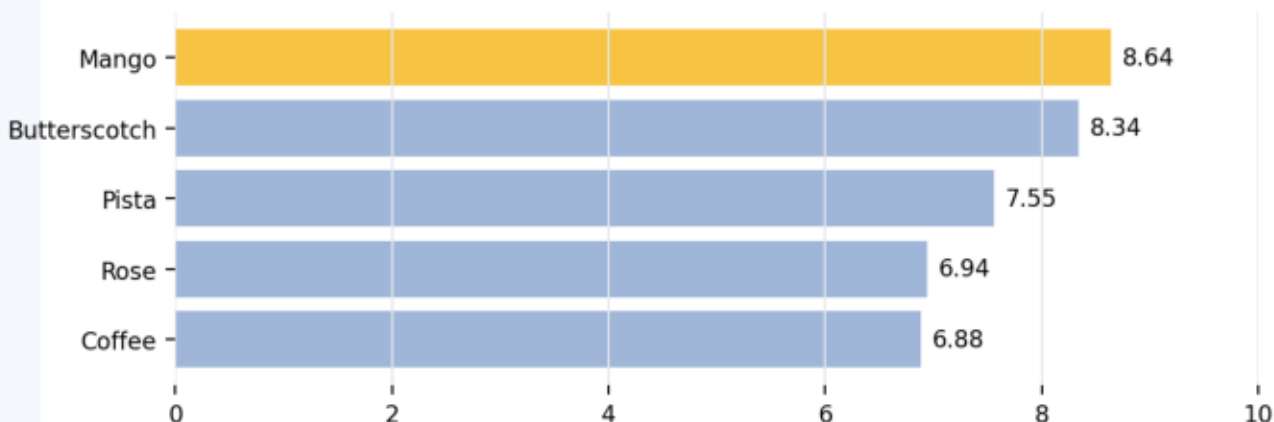

Key winners: Mango (86 votes, 8.64/10 avg rating) | Lemon (81 votes, 8.69/10 avg rating)

Problem Solved

Business Question

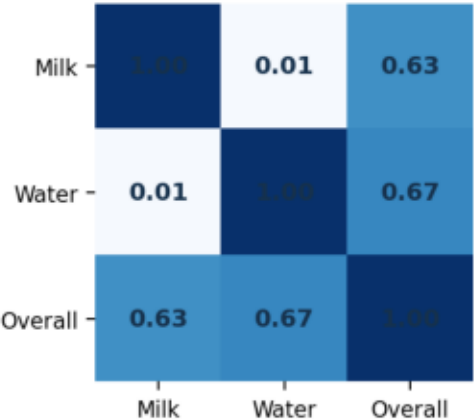

Which flavours should be prioritized?

During exhibitions, brands receive large amounts of visitor feedback, but raw feedback does not directly guide product decisions. This report converts reconstructed survey feedback into KPI-driven flavour, rating, purchase intent, and feedback theme insights.

Key Findings

- Mango leads milk-based flavours with 86 responses and 8.64/10 average rating.
- Lemon leads water-based flavours with 81 responses and 8.69/10 average rating.
- 98.4% of respondents show Medium or High purchase intent.
- Sugar variants lead with 149 responses, but Non-sugar has 96 responses and clear opportunity.
